

## How To Program The New Remote Control

1. Turn the hand held remote around and remove the two case screws.

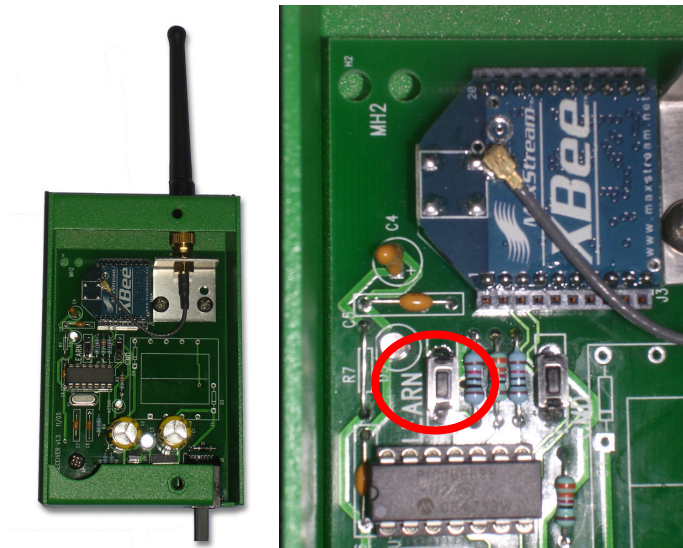

2. Open the remote control, remove it from its case, and set the top three switches to a unique configuration.

3. Press and release the “RESET” button. Wait three seconds before moving on.

4. Press and release the “LEARN” button on the receiver. The “LEARN” light will turn on.

5. The “LEARN” light will only stay on for about 3-5 seconds. While the “LEARN” light is still on, press and release the main button on the remote control. If the “LEARN” light goes out before you get a chance to do this step, go back to step #4 and try again.

6. If the receiver successfully learned the remote control, the “LEARN” light will blink quickly and then turn off. Reassemble everything and you’re done!
